Attributes & Variable

Attributes is defined as a characteristic or quality of a object. While anything that varies or changes over time time and can be expressed numerically is taken as a variable.

For example the variable agreement might be defined as having five attributes

1 = strongly disagree

2 = disagree

3 = neutral

4 = agree

5 = strongly agree

The variable is only the operationalized way in which the attribute (s) is or are represented for further data processing.
